Claims 11-24 are pending in this application.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 21 and 22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are vague and indefinite in their respective recitation of "immunomodulator" since one cannot determine that which is intended. The examiner contends that it is the claim language which must particularly point out and distinctly claim that which applicants regard as their invention; (see In re Windhaus, et al. 188 USPQ 129 In re Lundberg, et al. 113 USPQ 530). That is, the intended structure cannot be determined. Is an avian pathogen an immunomodulator?

35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

Claims 11-20, 23 and 24 are rejected under 35 U.S.C. § 101 because the claimed invention is directed to non-statutory subject matter. The "vaccine" as claimed, has the same characteristics and utility as that found in nature and therefore does not constitute patentable subject matter. In the absence of the hand of man, the naturally occurring attenuated infectious laryngotracheitis virus (ILTV) mutant is considered non-statutory subject matter. Diamond v. Chakrabarty, 206 USPQ 193 (1980). Additionally, mere purity of a naturally occurring product does not necessarily impart patentability. Ex parte Siddiqui, 156 USPQ 426 (1966). However, when purity results in a new utility, patentability is considered. Merck Co. v. Chase Chemical Co., 273 F. Supp. 68 (1967). See also American Wood v. Fiber Disintegrating Co., 90 US 566

(1974); American Fruit Growers v. Brogdex Co., 283 US 1 (1931); Funk Brother Seed Co. v. Kalo Inoculant Co., 283 US 127 (1984). Amending the claims to recite a purity limitation is suggested to obviate this rejection. Suggested language is "comprising an isolated attenuated infectious laryngotracheitis virus (ILTV) mutant and a pharmaceutically acceptable carrier or diluent . . . " It is, noted that attenuation is often a natural phenomenon; similarly, a mutant ILTV may naturally be found in a diluent (such as water) which is pharmaceutically acceptable.
